Dear customer,

Every year thousands of customers buy our high-quality products. And they do this for good reason:

- We offer an excellent price-performance ratio. Reliable quality at a fair price
- With a professional experience of over 20 years, we are able to provide you with the best possible measuring solutions
- Our high demand towards quality
- Of course all of our devices bear the CE Mark which is required by the EU
- Calibration certificates, workshops and consulting
- We are always happy to help you after your purchase

Our service guarantees a quick assistance.

1 Introduction

Using the CS Soft Basic software, measured data from the devices of the new device family (from DS500) can be read out, saved, displayed and evaluated.

2 System requirements

Hardware PC	from Win 7x64 / Mac
Main memory requirement	min. 4 GB RAM – recommended 8 GB RAM
Disk space	min. 10 GB – recommended 20 GB

3 Installation

Start the "CSBasic-Setup-x.x.x.exe" to install the software and follow the installation instructions. The software is installed automatically.

4 General

This chapter describes the menu items that have the same functionality in all screen views.

4.1 User interface

After starting via this button

CSBasic the following screen appears:

Cashboard - CS Basic 1.0.3 - production			↔ – □ ×
Bearbeiten Hilfe Dev			
=			CS Basic ♀ en -
B		>	<u>*</u>
Import record data	Open project	Read real time data	Download from device

Settings	Import from CS Soft Basic	Backups	Merge projects
Cottingo		Backapo	marge projecte
	\triangleright		
	N2,		
Q			
de	9		

Select your language

from the top right pull-down menu.

The buttons on the dashboard can be used to branch to the respective function. Click on the button on the top left, a sidebar opens:

≡		
		×
	dashboard	
	settings	
	license	

en

4.1.1 General settings

The general settings are defined in the menu item "settings". All changes must always be completed with the "Save" button.

Tab "General":

The company data with logo and the number of data lines for the raw data list.

Tab "Units": Set the decimal places for a unit in general.

Tab "Recycle bin":

The deleted projects appear here and could be restored.

Tab "Other":

The connection settings to an old CS Soft Basic are defined here. Please only make changes here after consultation with the internal IT, if you have already installed a local MySQL database with a different user / password.

4.1.2 Activate license

Use the menu item "license" to switch to licensing - where you can enter the license number and activate the software.

The mandatory fields are marked with a *.

It is possible to activate via e-mail – button:. To do this, copy-paste the mail text from the software into the mail body and send it to the specified mail address. After a few minutes the answer will be sent – copy-paste the mail body from the mail into the software at the required place and then the software has to be activated via the button.

Note:

If the software is to be used on another PC, you must first transfer the data via a database export (see below). Then the license key should be noted. Subsequently, the license can be deactivated under this menu item.

The software can be used for 30 days without a license and can be activated twice.

4.1.3 Disable license on computer change

If the workstation is to be changed, the software must first be deactivated on the old workstation

computer. This is done again as above under the menu license item. If the computer is connected

online to the internet, the button deactivate **X** Deactivate should be used. If not, then as described

above with the button **No Internet?** via an e-mail message about another device which is connected online with the internet is the deactivation to process.

Important: Only when this is completed, an activation can be made on the new workstation.

4.1.4 Last open project

As soon as a project has been selected in the software and has been loaded several times or has been slightly modified in the settings, a new entry is available in this menu:

last project

- click to open this project.

4.2 Dashboard

4.2.1 Import file

If data has been transferred to a USB stick, it can be read via this menu item

Import record data . The folders stored on the USB stick can be stored on any medium. The files in the "Export" folder must always be in a folder. The file names must not be changed.

Click on the menu item and the following dialogue for selecting the data (RECORDS.LOG) is opened:

Öffnen									×		
$\leftarrow \rightarrow$	← → Y										
Organisie	eren 👻 Neuer Ordno							•	•		
^	Name	^	Änderungsdatum	Тур	Größe						
ľ	📔 RECORDS.log		21.05.2014 16:00	LOG-Datei	1 KB						
1											
6											
<u> </u>											
4											
	Dateiname:	RECORDS.log				~	Log File (*.log)		\sim		
					\searrow	2	Öffnen 🔫	Abbrech			
					43						

Illustration 1 : Open Records.log

Select the desired folder with the RECORDS.LOG file (1) and confirm by clicking the "Open" button (2).

After that, the dialogue appears with the name entered in the datalogger, the number of measurement data, the number of recording days and the time period.

If this line is selected, the following dialogue appears:

Sea	rch				
# 🗢	Comment	Amount measurements	Amount dat files 🗢	From 🗢	То

Import record data

 \bigcirc

Cancel

Under time offset, the start time can be moved. The whole timeline is then placed on this start time.

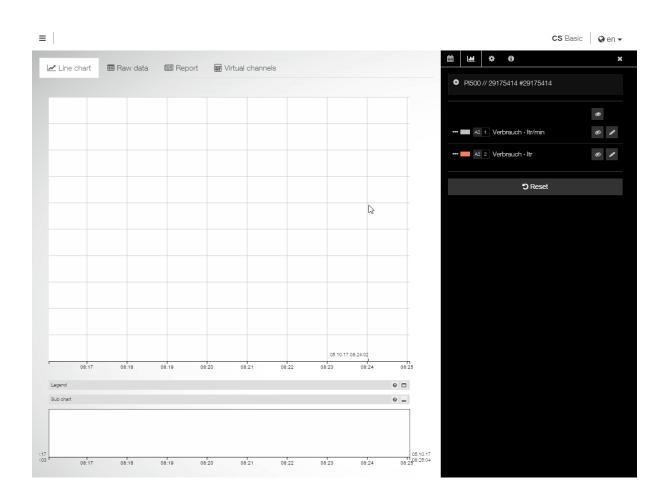

Tip: This is useful if you want to compare a fixed period of a measurement series with another fixed period of time. Serves to determine fluctuations / deviations within a period of time.

Under the tab *Add to project* the import can be added to an existing project.

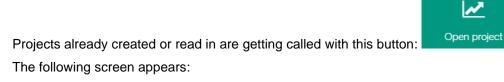

The data import is read in with the button Import files.

The progress is shown in the lower right corner. At the top right, a process symbol is shown.

After the import, you switch directly to the diagram view:

4.2.2 **Open project**

The following actions are available here:

3 4 5 ≯

2

- -
- Click on a project name to open the project If several projects are available you can filter or search above -
- Delete the project with this button a fter a query -
- Use the button 🖺 to export a project assign any file name _
- Use the button $\ensuremath{\ensuremath{\,^{\frown}}}$ to rename a project and to add a comment _
- The table can also be sorted see 🗢 -

4.2.3 Read in real-time data

)	>	

can be used to establish a real-time connection to an Ethernet-enabled This button Read real time data device. Data is then stored in the software and can be viewed simultaneously. The connection is made via ModBus TCP.

Start the button and the following dialogue appears:

Establish connection via ModBus TCP

×

Found devices (7) 😧	Searching for new CS devices
No device selected	T
IP address 😧	
192.168.178.20	
Port	
502	
Update interval(in seconds)	\triangleright
1 Second	T
✔ Activate automatic reconnection	
Project name 😧	
Recording from 17.05.18 09:03:18	
Save real time data to database	
	Establish connection Cancel

Establish connection

Select the devices from the network from the drop-down list.

It is also possible to enter an IP address from this network directly.

The port is normally 502.

Select the update interval from the drop-down list. Initial setting is update per second.

If a connection has been interrupted, you can use a checkbox to activate the automatic reconnection.

The name for the recording can be entered in the field Project name - a default is given.

The data can then also be stored in the local database for later evaluation - the checkbox must then be activated.

When a device is selected or a valid IP address is entered, the available channels are displayed:

Port

502

Available channels

Kanal Ch-A1 Subkanal 0 A1a (-)	
Kanal Ch-A2 Subkanal 0 A2a (kW)	
Kanal Ch-A3 Subkanal 0 Flow (-)	
Kanal Ch A2 Subkanal 1 Concumpt	()

Illustration available channels

Establish a connection with this button	Establish connection	. The connection is displayed on the top:
▶ 192.168.172.43 - Real time connection est	ablished 🕶	

192.168.172.80 - Real time connection established -

÷.

for example:

Pause real time connection

Select the next action from the drop-down list	 Close real time connection
--	--

- Pause real-time connection project is paused
- Stop real-time display project is completed

4.2.4 Load from device

Load the log data from a network-enabled device with this button Download from device

As with reading the real-time data, a device can be selected from the network or the IP address entered directly.

Establish the connection with this button *Connect*, a selection of the projects on the SD card of the selected device is displayed. By clicking the project, the dialogue for the selection of the time period and the time offset is displayed, as with the data import.

The loading process over TFTP is started via the button **Import record data** and switched directly to the diagram view. The following Ports must be enabled for this:

Port: 67/ 69/ 4011/ 1024-65535

4.2.5 Import from CS Soft Basic

With this button Import from CS Soft Basic data from an old version can be transferred to this PC.

A selection shows the existing projects. Click to accept the desired project - a progress history will be displayed. The data transfer can take some time for large amounts of data.

After the transfer, the system switches to the diagram view.

4.2.6 Backups

With the button Backups a backup can be created. The path can be selected above and created with the button Create backup.

It is also possible to switch to a backup previously created.

Attention: All data that has been read / created since this backup time is no longer available!!

4.2.7 Merge projects

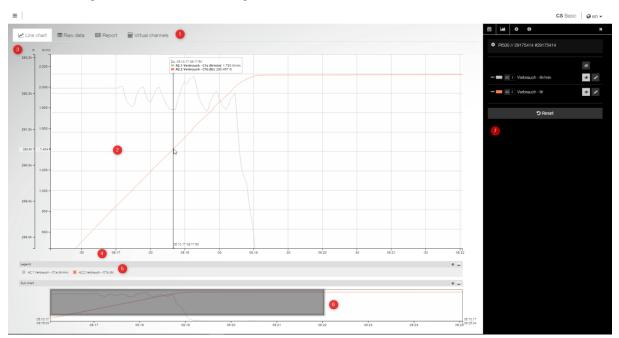

Merge projects can be used to merge two or more projects via a selection. It is possible to The button search projects by name or to use the sort function in the list.

The button Merge projects starts the processing and changes to the diagram view.

This means that several individual records can be merged into one project.

4.3 **Diagram view**

Several settings can be made in the diagram view. The basic view looks like this:

The individual elements are

- 1. Choice of presentation optional the virtual channels
- Display area of the selected representation here line chart
 x-axis range with the selected unit setting

- y-axis range with the time representation
 Legend representation can be shown or hidden
 Sub-chart for overview and zooming can be shown or hidden
- 7. Settings for display area setting can be shown or hidden.

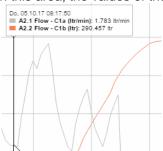

4.3.1 Representation

Select from the tab

- Line diagram -
- Raw data -
- Report -
- and the virtual channels as an option -

4.3.1.1 Line diagram

The line graph shows the selected channels from the settings. In this area you can zoom in and out with the mouse wheel. You can also click and drag the display area with the mouse. If the mouse pointer is moved in this area, the values of the displayed channels are displayed with the respective

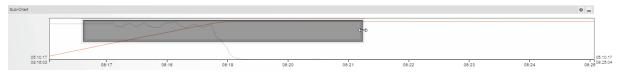

time in a window: Likewise, the intersection point on the x and y axes is displayed with the values.

Click right on a unit - then the associated channels which belong to the unit are highlighted and the others are displayed paler.

See below an additional legend which is normally hidden. Likewise, a short help can be faded in when

the mouse pointer is moved over this small question mark symbol. You can also click on a unit in the legend area - the effect is the same as clicking the unit in the axis view.

In the sub-chart below, the display area above can also be controlled with either click and drag or by moving the dark area oft he display window area:

As shown in the picture above, the mouse pointer then switches to a move symbol. Again, the mouse wheel can be used for zooming.

4.3.1.2 The settings / representation

After opening a project, the display of values is initially deactivated and the setting page of the line

diagram (diagram tab) is shown:

The following can now

be set on the diagram tab:

The upper part shows the device name and the serial number. If several devices are included in the project, a device can be selected using the radio button on the left in front of it.

The button can be used to show / display all channels or a channel in the respective channel line.

The button E^{dit channel} can be used to edit the display / setting for this channel. You can define channel name, color of the line, line style, value range and increment for the axis, decimal places and a moving average for the entered number of data points. Click again to exit the settings.

The axis order can be moved in the front area on the button the mouse pointer then becomes a

The period can be set on the period tab . Click on the date to open the selection of the period from (left area) to (right area). It can be set exactly down to the minute range:

Ê	05.10.	201	7					()	05.10	.201	7					Apply	Cancel
0		8	T	: 16	T			0		8	3 •	: 2	5 •				
		Sep	tember	•	2017	Ŧ				Octo	ober	T	2017	¥			
W	Mon	Tue	Wed	Thu	Fri	Sat	Sun	W	Mon	Tue	Wed	Thu	Fri	Sat	Sun		
	28	29	30	31	+	2	3	39	25	26	27	28	29	30	4		
	4	5	6	7	8	9	10	40	2	3	4	5	6	7	8		
37	11	12	13	14	15	16	17	41	9	10	11	12	13	14	15		
	18	19	20	21	22	23	24	42	16	17	18	19	20	21	22		
	25	26	27	28	29	30	+	43	23	24	25	26	27	28	29		
40	2	3	4	5	6	7	8	44	30	31	+	2	3	4	5		

The days crossed out in the calendar are not available in the project (there are no dates at this time). The green frame on the field indicates which area is currently selected.

The zoom range can also be fixed here via the button

You can also jump forward / backward through a selectable unit in the diagram:

< Hour >	Jump	0	
	<	Hour	

The display can also be reset - below the complete project run time is displayed as a note:

C Reset
Project span: 05.10.17 08.16.03 - 05.10.17 08.25.04

With the settings tab a unit can be displayed as a stacked area.

You can now switch to the report generation Create report = consumption analysis - more on that later.

It is also possible to print a diagram: Print diagram With the switch for the template, the diagram interval, with or without statistics sheet, a selection can be made and a comment can be recorded.

With the button Go to print preview the report is created. Here is a sample report:

With save the file is created.

4.3.1.4 Report (consumption analysis)

With the report tab Report the report (consumption analysis) can be created.

The prerequisite for the report is either a consumption unit $(m^3, ltr, ...)$ of a gas and / or a unit of measure for the output (kWh).

The report is created according to the following criteria:

Channels

 A1 Flow A1.1 Flow A1.2 Total (m³/h) A2 A3 A4 Power A4.1 Power A4.2 Power (kW) B3 B4 C1 Total power 		
Period	Type of report	
01.01.15 00:00:00 - 31.12.15 23:59:59	Annual report	~
Price configuration		
Global price template	~	Price configuration
		,
		I Create report

By means of the checkboxes in front of channels, the selection for the report is made.

The period can be done again with a calendar with settings from - to. Furthermore, the report type year, month and week and a price template (global or project-specific template) can be selected. The price template can also be configured here.

The button ^I Price configuration... opens the settings:

Price configuration for channels

Unit	Device	Channel
m ³ •	All systems 🔹	All channels 🔹
kWh 👻	All systems 🔻	All channels 👻
Select 💌	All systems 🔹	All channels 🔹
Select 💌	All systems 🔻	All channels 🔹
		+ Add channels filter
Currency	\triangleright

		Cancel 🖺 Save
Select the unit and the setting	s here.	
The button <a> opens the sett	ings for this unit:	
Periods for channels filter	-	
Channel filter: kWh •All systems •All channels		
1. 01.01. 00:00:00 - 31.12. 23	59:59	ø
	2	+ Add date range
X Delete channels filter		Cancel Apply

Set a period of time (calendar function with click in the period) and within the period for each minute of the day an exact Euro amount for the selected unit.

Here's an example of different prices for consumptions over three time zones over the entire year:

Periods for channels filter

Channel filter: m³ ·All systems ·All channels

00:00		06:00		12	2:00		18:00	0	24:00
	00:00	- 05:59	×	06:00) - 21:59	×	22:00	- 24:00	×
Day	€/m³			€/m³			€/m³		
Monday		0,02			0,03			0,02	
Tuesday		0,02			0,03			0,02	
Wednesday		0,02	2		0,03			0,02	
Thursday		0,02			0,03			0,02	
Friday		0,02			0,03			0,02

With the button Create report the calculation is triggered and the dialogue for the report creation opens:

CS Basic

	×
	۳
Cancel Go to print preview	,
	Cancel Go to print preview

Here the report template, a comment and the print of the price template can be selected or entered and then switched to the print preview.

This is followed by the calculation – which is displayed with a processing note:

Please wait...

Create consumption report

The report is divided into the following parts:

First, the first channel is shown - in the example, the consumption with the monthly representation. The sums per unit and also the costs are shown. Also, the min / max and average values are displayed per period.

Consumption report: international sales meeting

Period: Donnerstag, 01.01.15 00:00:00 - Donnerstag, 31.12.15 23:59:59

A1 Flow H1-4

Note: Flow

		January	February	March	April	May	June	July	August	September	October	November	December	Sum

With the button Store PDF a pdf document is created (or further processing in the respective program of the pdf display of the client PC).

5 Optional modules

5.1 Virtual Channels

With this module, channel calculations can be added or done at any time after recording.

For example, it could be summation for consumption (medium / electricity).

🛃 Liniendiagramm 🖩 Rohdaten 🕮 E	Bericht 🖩 Virtuelle Kanäle

Ablauf gem. Darstellung oben:

Under 1), the channels from the first device can be selected. Under 3) can also be changed immediately to another device. Then under 4) select a channel from this device.

If a channel has been marked, then a formula can be formed under 2) using the given operators. To complete it can be done via another channel selection under 1).

Completed is then under 5) with the name, 6) with the choice in which device the virtual channel should be added and under 7) the unit.

The calculation is then completed with 8).

Here's an example of a totals calculation:
