

VU 570 - Vortex ultrasonic flow sensor for technical gases and mixed gases

Independent from gas composition – integrated pressure and temperature compensation – larger measuring range than common Vortex sensors

FIELD OF APPLICATION:

- Technical gases
- Mixed gases
- Compressed air in PET bottles production
- LPG
- Propane
- Crypton

Function principle Vortex ultrasonic:

Benefits at a glance:

- Measurement of standard volume flow, operating volume flow, and mass flow
- Suitable for unknown/changing gas compositions and mixed gases
- The innovative measuring principle grants a precise flow measurement in different gases
- Suitable for quick temperature and pressure changes as well as high mass flows

Advantages towards common mechanic gas meters:

- No moving parts – no wear

Advantages towards common Vortex sensors:

- Precise measurement already from 0.3 m/s (59 fpm)
