

Industrial gas meter with M-Bus for compressed air, natural gas, biogas...

Compressed air and natural gas meters with M-Bus now also directly from the manufacturer.

CS Instruments GmbH & Co. KG was the OEM-manufacturer of the ENDYS AIR compressed air meter with M-Bus from 2010 to the end of 2017.

The ENDYS AIR products have been marketed exclusively through Hochhut GmbH, which now works with another manufacturer.

The CS Instruments GmbH & Co. KG now offers the products themselves.

The successor product of ENDYS AIR now offers all the possibilities of digitization and is the ideal consumption meter for Industry 4.0.

The successor products of the well-known ENDYS AIR company Hochhut have been metrologically improved and completely revised and in addition to the M-Bus interface also have the following additional outputs or bus systems:

- Modbus RTU
- Modbus TCP or TCP PoE
- Profibus, Profinet
- 4..20 mA and pulse
- Hard (in preparation)

M-Bus

The VA 520, VA 500, VA 550 and VA 570 industrial gas meters with M-Bus are the ideal compressed air meters or consumption meters for natural gas, biogas, methane, nitrogen, argon, carbon dioxide for consumption measurement and flow measurement.

VA 520, VA 500, VA 550, VA 570 with M-Bus are ideal for conversion or retrofitting and for new installations of gas meters, compressed air meters, flow meters, etc. to existing or new energy management software according to DIN ISO 50001 and DIN ISO 16247 and building management systems.

Advantages:

- Direct display in Nm³/h, or NI/min and temperature in C°
- Calorimetric measuring principle - no additional pressure and temperature measurement necessary
- High measurement accuracy ¼ to 3 inches
- VA 500 and VA 550 insert version from ½ inch to DN 400 / DN 500

VA 520 Compressed air meter with M-Bus

4...20 mA output for actual flow

Pulse output for total flow (counter reading), galvanically isolated or M-Bus (optionally)

Measuring device removable: Dismounting of the whole measuring section is not necessary, no bypass required

Display twist able by 180°C e.g. in case of reverse flow direction

Easy installation into the existing pipeline due to integrated measuring section and welding neck according to (EN 1092-1 PN 40)

High measuring accuracy due to defined measuring section (inlet and outlet section)

Display shows two values at the same time:

- Actual flow in m³/h, l/min...
- Total consumption(counter reading) in m³, l
- resp. temperature measurement

Values indicated in the display turnable by 180°C, e. g. in case of overhead installation

At the touch of a button

- Reset of counter reading
- selection of units
- zero-point adjustment, leak flow volume suppression

Intelligent solutions for accurate flow measurement for compressed air and gases

The new affordable flow sensors VA 520 work according to the approved calorimetric measuring principle. An additional pressure and temperature compensation is not necessary. Contrary to the previously used bridge circuit the newly developed evaluation electronics records all measured values digitally. This enables very precise and fast measurements.

Due to the new evaluation electronics all VA 520 have an integrated Modbus output as a standard. So all parameters

can be transferred via Modbus. Due to its compact design it is possible to monitor all compressed air systems from the compressor to the smallest compressed air tool (1/4" to 3 inch) with the new affordable flow sensor VA 520.

VA 500 flow sensors are available for larger pipe diameters from DN 50 to DN 1000. Apart from compressed air also other gases like e.g. nitrogen, oxygen and CO2 can be measured.

Application range of VA 520:

- Compressed air balancing, compressed air consumption measurement
- Leakage air/leak rate determination
- Mobile compressed air measurement in front of single machines / plants
- Flow measurement of process gases like e.g. nitrogen, CO2, oxygen, argon, nitrous oxide
- Flow measurement at nitrogen generators

VA 520 with M-Bus

Technical data

VA 520

Parameters:	m³/h, l/min (1000 mbar, 20°C) in case of compressed air resp. Nm³/h, NI/min (1013 mbar, 0°C) in case of gases
Units adjustable via keys at display:	m³/h, m³/min, l/min, l/s, ft/min, cfm, m/s, kg/h, kg/min
Meas. principle:	calorimetric measurement
Sensor:	Thermal mass flow sensor
Meas. medium:	air, gases
Gas types adjustable via external device DS 400, DS 500, PI 500	air, nitrogen, argon, nitrous oxide, CO2, oxygen
Meas. range:	see table at the left
Accuracy: (m.v.: of meas. value) (f.s.: of full scale)	± 1.5 % of m.v. ± 0.3 % of f.s. on request ± 1.0 % of m.v. ± 0.3 % of f.s.
Operating temp.:	-30...80 °C
Operating pressure:	up to 16 bar optional up to PN 40
Digital output:	RS 485 interface, Modbus-RTU, M-Bus (optionally)
Analogue output:	4...20 mA for m³/h resp. l/min
Pulse output:	1 pulse per m³ resp. per liter galvanically separated Pulse value on Display adjustable
Power supply:	18...36 VDC, 5 W
Burden:	< 500 Ω
Housing:	polycarbonate
Meas. section:	stainless steel, 1.4301 or 1.4571
Mounting thread meas. section:	R 1/4", R 1/2", R 3/4", R 1", R 1 1/4", R 1 1/2", R 2" external thread

VA 570 with M-Bus and integrated measuring section

VA 570 is supplied with an integrated measuring section. The measuring sections are available in flanged version or with R resp. NPT thread.

A special feature is the removable measuring head. So the measuring unit can be removed easily and quickly for calibration or cleaning purposes without having to dismount the measuring section intricately. During this period the measuring section is sealed by a closing cap (accessory).

Flow measuring ranges VA 570

If you want to measure the flow of a special gas mixture please contact us. On request we are quite pleased to offer a real gas calibration under process conditions.

Measuring ranges of further gases like: Nitrous oxide (N2O), helium (He), propane (C3H8), biogas* (CH4/CO2 60/40) on request!

Measuring head removable

Screwing with centring device

Easy cleaning of the sensor system

VA 570 with M-Bus

Präzise Verbrauchs-/Durchflussmessung für Druckluft und Gase

The new flow sensors VA 550/ 570 work according to the calorimetric measuring principle. Therefore an additional temperature and pressure compensation is not necessary.

Due to its robust design, the aluminum die cast housing, the robust sensor tip made from stainless steel 1,4571, the new VA 550/ 570 are suitable for demanding industrial applications. An ATEX version is available for applications in explosive areas.

For flow measurement e. g. of natural gas there is a version with a DVGW admission.

*Technical data see VA 500

Application range:

- Ideal also for the outdoor area
- Compressed air measurement and distribution
- Leakage measurement of compressed air and gases
- Flow measurement of gases like e. g. nitrogen, argon, carbon dioxide, oxygen and so on
- Flow measurement in vacuum systems
- Flow measurement of explosive gases like natural gas, methane, propane, hydrogen with ATEX approval
- Flow measurement of corrosive, acid gases like e. g. biogas with different gas mixtures
- Measurement of oxygen and natural gas at gas burners
- Flow measurement of gas mixtures like e. g. forming gas

Applicable in all sectors like e. g.:

- Chemistry, petrol chemistry
- Natural gas, methane...
- Pharmaceutical industry
- Food production
- Breweries
- Diaries
- Power plants
- Semiconductor/ electronics
- Automotive industry

Request detailed order code

What are the advantages of our flow measuring technology?

1) Even under pressure, the flow sensor VA 500 is mounted by means of a standard 1/2" ball valve. During mounting and dismounting the safety ring avoids an uncontrolled ejection of the probe which may be caused by the operating pressure.

For the mounting into different pipe diameters VA 500 is available in the following probe lengths: 120, 160, 220, 300, 400 mm.

So the flow sensors are being mounted into existing pipelines with inner diameters of 1/2" upwards.

The exact positioning of the sensor in the middle of the pipe is granted by means of the engraved depth scale. The maximum mounting depth corresponds with the respective probe length. Example: VA 500 with probe length 220 mm has a maximum mounting depth of 220 mm.

2) If there is no suitable measuring site with a 1/2" ball valve present there are two simple possibilities to set up a measuring point:

A Weld on a 1/2" screw neck and screw on a 1/2" ball valve

B Mount spot drilling collar incl. ball valve (see accessories)

A Screw neck

B Spot drilling collar

Drilling under pressure

By means of the drilling jig it is possible to drill under pressure through the 1/2" ball valve into the existing pipeline. The drilling chips are collected in a filter. Then the probe can be mounted as described under point 1.)

3) Due to the large measuring range of the probe even extreme requirements to the consumption measurement (high volume flow in small pipe diameters) can be met. The measuring range is depending on the pipe diameter - see table on the right hand side.

VA 500 - with M-Bus

Flow sensor for compressed air and gases

The new VA 500 for flow measurement of compressed air and gases, optionally with display for flow in m³/h and total flow in m³.

Contrary to the previously used bridge circuit the newly developed evaluation electronics records all measured values digitally. This leads to a better accuracy also in case of large measuring spans of 1:1000.

Special features:

- RS 485 interface, Modbus-RTU as a standard
- Incl. temperature measurement
- Integrated display for m³/h and m³
- Usable from 1/2" to DN 1000
- Easy installation under pressure
- 4...20 mA analogue output for m³/h resp. m³/min
- Pulse output for m³ or M-Bus (optionally)
- Inner diameter adjustable via keypad
- Consumption counter resettable
- Adjustable via keys at the display: Reference conditions, °C and mbar, 4...20 mA scaling, pulse weight

flexible mounting
thread G 1/2"

safety ring
Ø 11.7 mm

Inner diameter adjustable

Application range:

- Ideal also for the outdoor area
- Compressed air measurement and distribution
- Leakage measurement of compressed air and gases
- Flow measurement of gases like e. g. nitrogen, argon, carbon dioxide, oxygen and so on
- Flow measurement in vacuum systems
- Flow measurement of explosive gases like natural gas, methane, propane, hydrogen with ATEX approval
- Flow measurement of corrosive, acid gases like e. g. biogas with different gas mixtures
- Measurement of oxygen and natural gas at gas burners
- Flow measurement of gas mixtures like e. g. forming gas

Applicable in all sectors like e. g.:

- Chemistry, petrol chemistry
- Natural gas, methane...
- Pharmaceutical industry
- Food production
- Breweries
- Diaries
- Power plants
- Semiconductor/ electronics
- Automotive industry

Available with option:
Ethernet Modbus/TCP

Technical data VA 550/ 570

Measuring range VA 550:	0.1...92,7 Nm/s, standard version* 0.1...185 Nm/s, max. version* 0.1...224 Nm/s, high speed version*
Accuracy: accuracy class (m.v.: of meas. value) (f.s.: of full scale)	± 1.5 % of m.v. ± 0.3 % of f.s. <u>on request</u> ± 1.0 % of m.v. ± 0.3 % of f.s.
Accuracy indications	referred to ambient temperature 22°C ± 2°C, system pressure 6 bar
Repeatability:	0.25 % of m.v. in case of correct mounting (mounting aid, position, inlet section)
Measuring principle:	Thermal mass flow sensor, the measuring effect is based on the cooling down of a heated sensor PT 45 by bypassing gas. The ambient temperature is measured with a PT 100. An additional pressure and temperature compensation is not necessary.
Response time:	t90 < 3 s
Operating temperature range probe tube/display unit:	-40...180 °C probe tube -40...70°C display unit -40...120°C for ATEX version
Adjustment possibilities via display, external hand-held meter PI 500, PC Service Software, remote diagnosis:	Nm³/h, Nm³/min, Nl/min, l/s, ft/min, cfm, kg/h, kg/min, inner diameter, reference conditions °C/°F, mbar/hPa, zero-point correction, leak flow volume suppression, scaling of analogue output 4...20 mA, pulse/alarm, error codes and so on
Adjustment possibilities via external device DS 400, DS 500 or PI 500	Gas type: air, nitrogen, CO2...
Outputs:	<u>Standard:</u> Modbus RTU, 4...20 mA activ (not galv. isolated), galvanically isolated pulse (pulse weight freely selectable), alarm relays (max. 48 VDC, 0.5A) <u>Optional:</u> 2 x 4...20 mA outputs galvanically isolated, Ethernet Interface (Modbus/TCP), Profibus DP, Profinet, 2 x 4...20 mA outputs passive, M-Bus
Burden:	500 Ohm
Additional average value calculation:	for all parameters freely adjustable from 1 minute up to 1 day, e. g. 1/2 hours average value, average day value
Protection class :	IP 67
Material:	Housing aluminium die cast, probe tube stainless steel 1,4571
Screw-in thread:	G 1/2" ISO 228, NPT 1/2", R 1/2", PT 1/2" available
Operating pressure VA 550:	50 bar; in special version 100 bar (For DVGW approval max. 16 bar)
Operating pressure VA 570:	16 bar; in special version 40 bar
Power supply:	18...36 VDC, 5 W
Approval:	ATEX II 2G Ex d IIC T4, DVGW

Description	Order no.
VA 550 flow sensor, measuring head in robust aluminium die cast housing - Request order code	0695 0550

Industrial gas meter with M-Bus interface

The M-Bus (meter bus) is a fieldbus and is used for consumption data acquisition and remote meter reading of consumption meters and gas meters for example for compressed air, natural gas, nitrogen, argon, CO₂ and other gases or for water, heat, cold, etc.

The M-Bus stands for the European standard Meter-Bus for the transmission of consumption values, meter readings and measurement data.

The M-Bus was originally described in the European standard EN 1434. The M-Bus has become an independent standard in the standard series EN 13757.

The M-Bus transmits data serially on a reverse polarity protected 2-wire line.

The M-Bus has gained market importance in measuring data acquisition and transmission. Especially for low-priced consumption meters and through the simple and reverse polarity safe installation of for example compressed air meters or gas meters, the M-Bus has prevailed in many companies.

This allows the VA 520 M-Bus compressed air meter or VA 500 M-Bus gas meter to be connected to an existing one M-Bus energy monitoring software or M-Bus energy management software or connect to M-Bus master.

The VA 520 / VA 500 with M-Bus is an M-Bus slave and is polled by the M-Bus master. It may only be one master in the bus system, otherwise addressing errors may occur.

The M-Bus is mainly interesting in the context of low-cost consumption-capture measurement in a building control system as part of an energy management system according to DIN ISO 5001 and DIN ISO 16247. The M-Bus interface is designed from 300 to 9600 baud (bit / s).

The maximum total power length depends on the cable cross-section and the cable-specific properties (resistance and capacity), the maximum cable length is 4000 m.

M-Bus advantages:

- With the M-Bus, all consumption meters can be connected to a central unit via a single polarity-protected cable (bus)
- All bus participants (electricity meters, compressed air meters, gas meters, consumption meters for compressed air and gases, etc.) are supplied directly via the two-wire bus.
- Devices from different manufacturers can be connected to a building system, so that the user is not bound to a meter manufacturer.
